The time period for reply, if any, is set in the attached communication.

Office Action Summary	Application No. 10/560,576	Applicant(s) CARSON ET AL.	
	Examiner HARRY D. WILKINS III	Art Unit 1723	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 16 March 2011 has been entered.

Status

2. The rejection of claims 208 and 178-203 under 35 U.S.C. 112, second paragraph has been withdrawn in view of Applicant's cancellation of claim 208.
3. The rejection of claim 204 as being anticipated by Bremer et al is withdrawn in view of the absence of a disclosure of the conduits in the walls in Bremer et al.

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

4. Claims 209-227 and 184, 193, 194, 201-203, are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. Claim 209

Art Unit: 1723

recites “interior walls”, “plural membranes” and “slots in the interior walls for holding membranes”. However, as shown in figure 6A, which Applicant points to for support of new claim 209, there is only a single interior wall of sinuous shape. Portions of the single interior wall act as a membrane, such that there are not “plural membranes”. Further, the specification describes the slots in the interior walls for holding the electrodes, not the membranes.

Allowable Subject Matter

5. Claim 204, along with dependent claims 189-192, 195-197 and 205-207, is allowed.
6. Claim 209, along with dependent claims 184, 193, 194, 201-203 and 210-227, would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph set forth in this Office action and to properly convey the structure shown in figure 6A.
7. Regarding claim 204, the prior art fails to teach or suggest the conduits in the wall of the electrochemical cell connecting the individual anolyte areas and individual catholyte areas.
8. Regarding claim 209, the prior art fails to teach or suggest the serpentine interior wall acting as multiple membranes between alternating anodes and cathodes.

Conclusion
